Absorbed Sub-Fund 1	Absorbed Sub-Fund 2	Absorbed Sub-Fund 3	Receiving Sub-Fund
<p>The risks pertaining to an investment in the Active Bond Plus Sub-Fund are those related to interest rates, debt securities, equity and currencies.</p> <p>Investing in equity securities may offer a higher rate of return than those in short term and long term debt securities. However, the risks associated with investments in equity securities may also be higher, because the investment performance of equity securities depends upon factors which are difficult to predict. Such factors include the possibility of sudden or prolonged market declines and risks associated with individual companies. The fundamental risk associated with any equity portfolio is the risk that the value of the investments it holds might decrease in value. Equity security values may fluctuate in response to the activities of an individual company or in response to general market and/or economic conditions. Historically, equity securities have provided greater long-term returns and have entailed greater short-term risks than other investment choices.</p> <p>Debt securities are subject to the risk of an issuer's inability to meet principal and interest payments on the obligation (credit risk) and</p>	<p>Debt securities are subject to the risk of an issuer's inability to meet principal and interest payments on the obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk).</p> <p>As the European High Yield Bond Sub-Fund may invest part of its assets in lower rated bonds, the investors' attention is drawn to the fact that such bonds may be considered speculative and that they tend to be more volatile than higher rated bonds. In addition, investment in lower rated bonds is subject to greater risk of loss of principal and interest (including the risk of default) than higher rated bonds.</p> <p>In certain countries, there is the possibility of expropriation of assets, confiscatory taxation, political, social economic or monetary instability or diplomatic developments which could affect investment in those countries. The potential effects of the use of financial derivative instruments on the risk profile are as follows: 1) when hedging the portfolio against rises in interest rates, in case of rates actually falling the Sub-Fund could miss the opportunity of realizing capital gains; 2) when using exchange traded futures and options on equity indices for investment</p>	<p>Debt securities are subject to the risk of an issuer's inability to meet principal and interest payments on the obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk).</p> <p>As the Active European Credit Sub-Fund may invest part of its assets in lower rated bonds, the investors' attention is drawn to the fact that such bonds may be considered speculative and that they tend to be more volatile than higher rated bonds. Absorbed Sub-Fund 1	Absorbed Sub-Fund 2	Absorbed Sub-Fund 3	Receiving Sub-Fund
3 category	4 category	4 category	3 category

There are no differences between the Absorbed Sub-Funds and the Receiving Sub-Fund with regard to the material risks, which are described as follows:

“Credit Risk: the issuer of any debt security (including high yield bonds) acquired by the Sub-Fund may be unable to meet principle and interest payment on its financial obligations. The Sub-Fund may invest in non investment grade or non-rated debt securities.

Liquidity Risk: The assets in which the Sub-Fund invests may be illiquid or restricted as to resale, or may be traded less frequently and in smaller volumes, all of which may cause difficulty when buying or selling securities at a desirable price.

Operational Risk: the Sub-Fund may suffer loss due to human error or omission, process errors, system disruption or external events. Assets may be held by a correspondent.

Counterparty Risk: when entering into OTC traded derivatives with a counterparty, the Sub-Fund may incur losses if the counterparty becomes insolvent.

Currency Risk: the Sub-Fund may be exposed to currency exchange risks where the assets and income of the Sub-Fund are denominated in currencies other than the currency of the Sub-Fund or the Share Class. Changes in exchange rates between currencies or the conversion from one currency to another may cause the value of a Sub-Fund’s investments to decline or increase.

Impact of derivatives: a careful of derivatives can be beneficial to the Sub-Fund but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies.

More information in relation to risks in general may be found in the section “Risk Factors” of the Prospectus”.

assets may then also be reinvested according to the investment strategy of the Receiving Sub-Fund.
